DAX FUNCTIONS

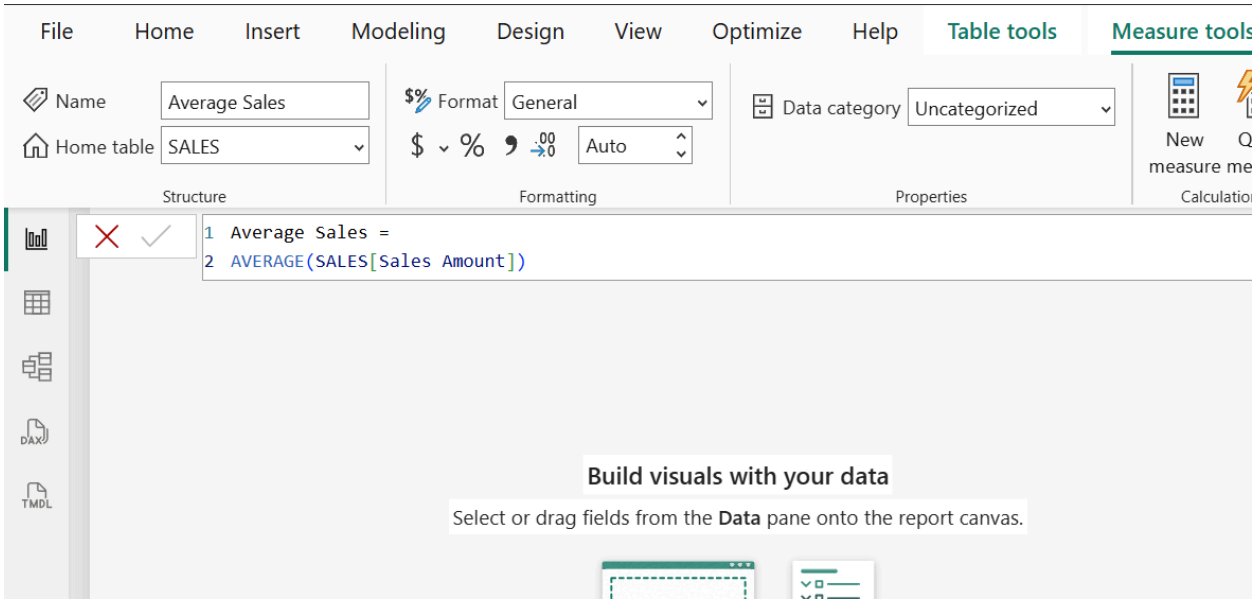

Calculate Total Sales using SUM()

SUM() adds all the values in an existing numeric column.

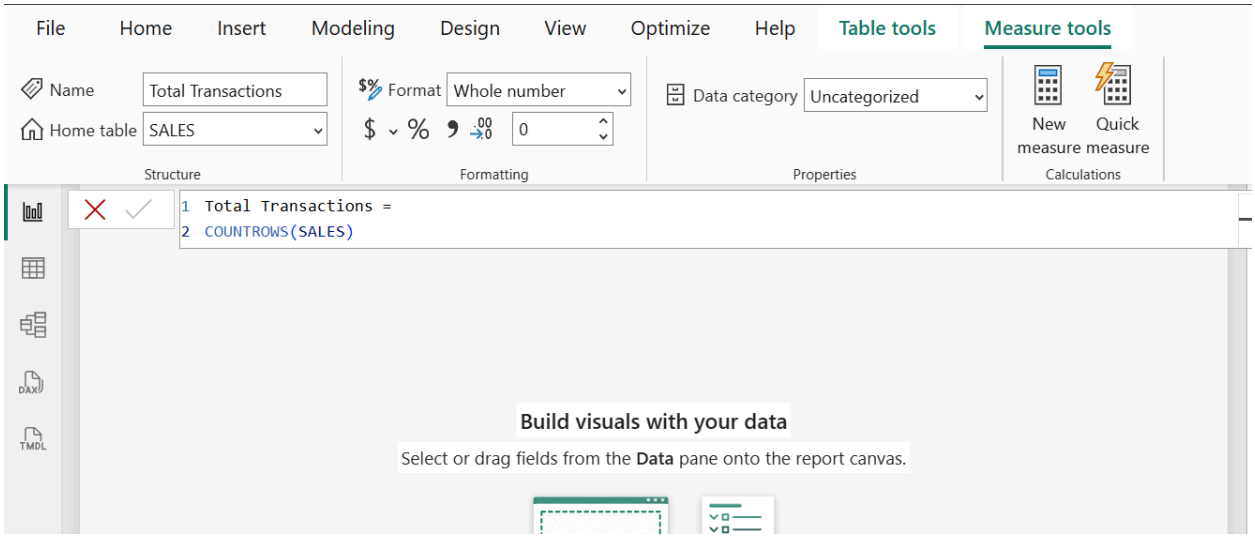

Calculate Average Sales using AVERAGE()

AVERAGE() calculates the mean of all sales amounts.

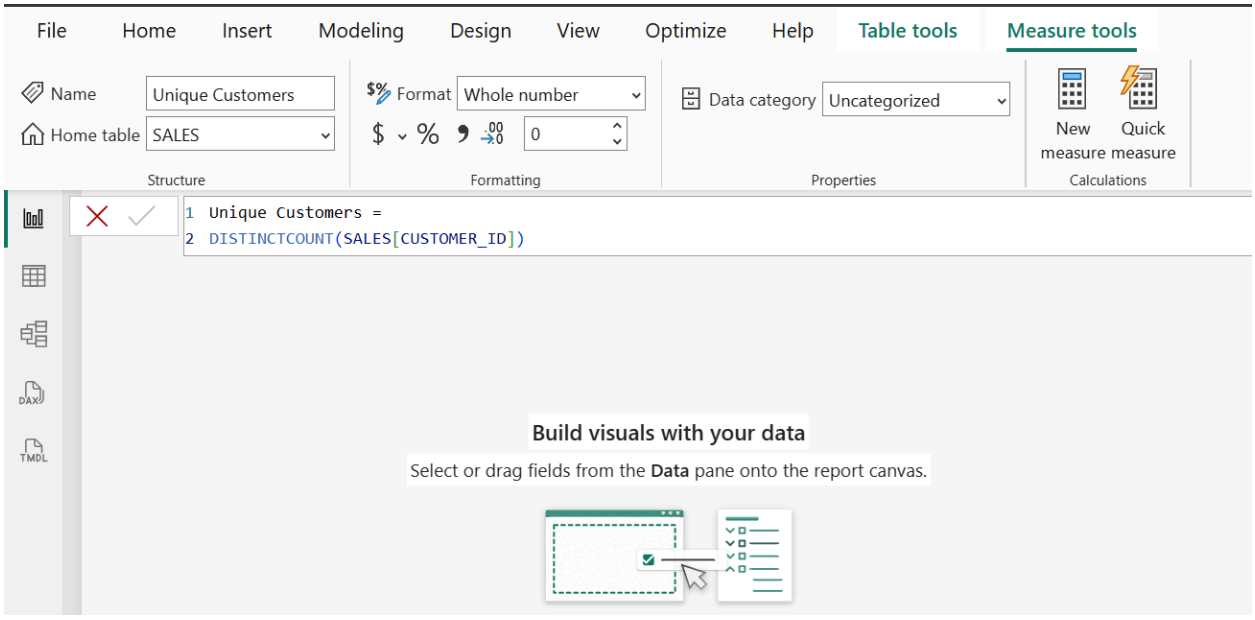

Count Transactions using COUNTROWS()

COUNTROWS() counts the number of records in the SALES table.

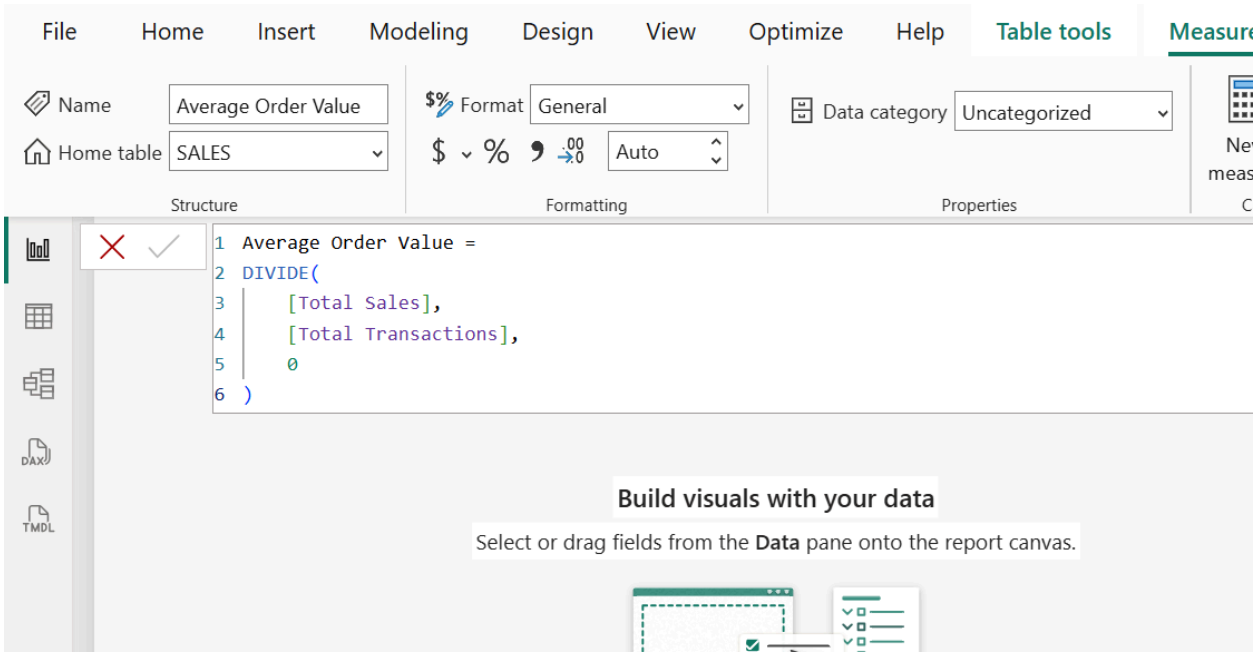

Calculate Unique Customers using DISTINCTCOUNT()

DISTINCTCOUNT() counts each customer only once, even if they have placed multiple orders.

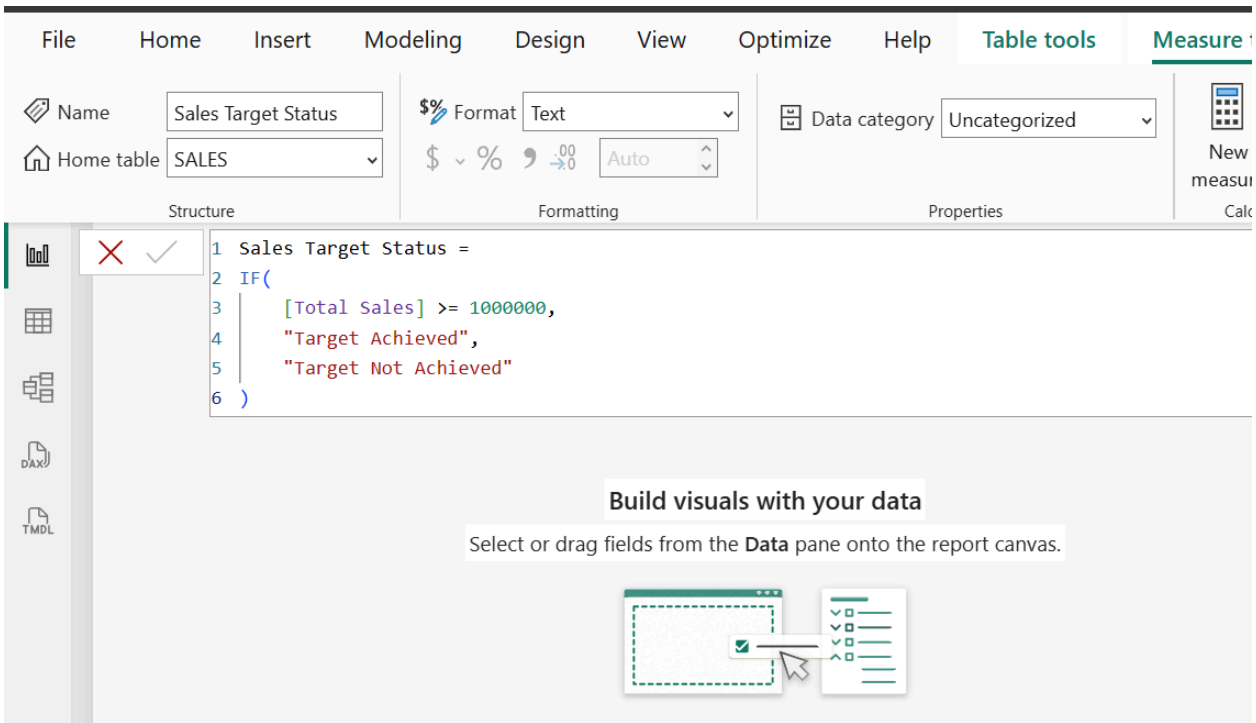

Calculate Average Order Value using DIVIDE()

DIVIDE() safely performs division.
The third argument `0` is the alternate result if the denominator is zero.
Average Order Value tells us how much revenue is generated per transaction.

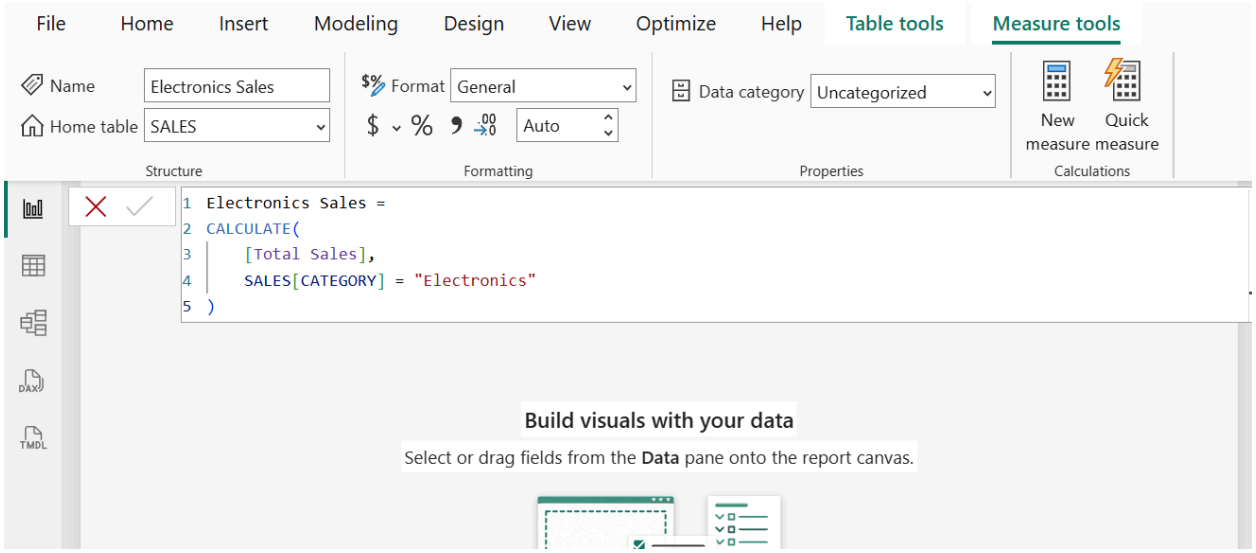

Check Sales Target using IF()

IF() checks whether total sales are greater than or equal to ₹10,00,000.
If true, it returns Target Achieved.
Otherwise, it returns Target Not Achieved.

Calculate Electronics Sales using CALCULATE()

CALCULATE() evaluates an expression under a specified filter context.

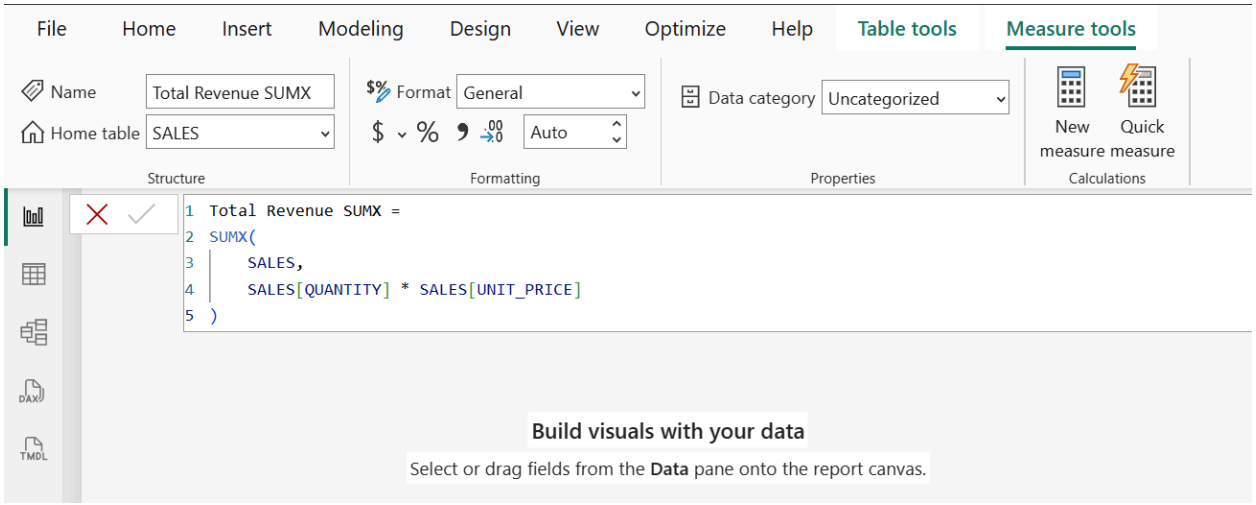

Calculate Revenue using SUMX()

SUMX() is an iterator function.

It:

1. Takes the SALES table.
2. Reads one row at a time.
3. Multiplies QUANTITY by UNIT_PRICE.
4. Adds the calculated values from all rows.
